

DIO32321

Low-Power, USB 2.0 High-Speed Switch

Description

The DIO32321 is a low-power, dual SPDT2-port high-speed analog switch. It handles bidirectional signal flow optimized for switching a high-speed (480 Mbps) source or a full-speed (12 Mbps) source.

The DIO32321 has a high channel-to-channel noise isolation and a low bit-to-bit skew which allows it to pass high-speed differential signals with good signal integrity. Each switch offers little or no attenuation of the high-speed signals at the outputs.

The DIO32321 contains special circuitry on the D+/D- pins, which can tolerate up to 5.5 V when the USB devices are either powered off or powered on.

The DIO32321 is available in three types of Green packages: QFN1.4*1.8-10, MSOP-10, and QFN1.4*1.2-10 package.

2. Absolute Maximum Ratings

Exceeding the maximum ratings listed under Absolute Maximum Ratings when designing is likely to damage the device permanently. Do not design to the maximum limits because long-time exposure to them might impact the device's reliability. The ratings are obtained over an operating free-air temperature range unless otherwise specified.

Symbol	Parameter	Min	Max	Unit
V_{CC}	Supply voltage	-0.3	6.0	V
V_{CNTRL}	DC input voltage (S, /OE)	-0.3	V_{CC}	V
V_{SW}	DC input I/O voltage	-0.3	6.0	V
$V_{D+/D-}$	D+/D- DC voltage ⁽¹⁾	-0.3	9	V
I_{IK}	DC input diode current	-50		mA
I_{OUT}	DC output current		50	mA
T_{STG}	Storage temperature	-65	150	°C

Note:

(1) This rating only applies to the D+/D- pin with respect to GND. V_{CC} must be powered within the recommended operating conditions of 2.7 V to 5.5 V and the /OE pin must be logic high for this rating to be applicable. Any condition where V_{CC} is unpowered or the /OE pin is not high must refer to the rest of the Absolute Maximum Ratings Table.

3. Recommended Operating Condition

Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. The ratings are obtained over an operating free-air temperature range unless otherwise specified.

Symbol	Parameter	Min	Max	Unit
V_{CC}	Supply voltage	2.7	5.5	V
V_{CNTRL}	Control input voltage (S, /OE)	0	V_{CC}	V
V_{SW}	Switch I/O voltage	0	5.5	V
T_A	Operating temperature	-40	85	°C

4. ESD Ratings

When a statically-charged person or object touches an electrostatic discharge sensitive device, the electrostatic charge might be drained through sensitive circuitry in the device. If the electrostatic discharge possesses sufficient energy, damage might occur to the device due to localized overheating.

Model	Condition	Rating	Unit
HBM	JEDEC: JESD22-A114, all pins	6000	V
