### Descriptions

The DIO1523 is a dual Single-Pole, Double-Throw (SPDT) analog switch. DIO1523 operates from a single 1.8V to 4.2V supply and features an ultra-low on resistance of  $0.75\Omega$  at a +4.2V supply and  $T_A = 25^\circ C$ . This device is fabricated with sub-micron CMOS technology to achieve fast switching speeds and is designed for break-before-make operation.

DIO1523 guarantees  $0.04\Omega$  on-resistance matching between switches, on-resistance flatness over the signal range, high off-isolation and low crosstalk, which ensures excellent linearity and low distortion when switching audio signals. DIO1523 consists of two normally open and two normally close switches.

DIO1523 provides packages with Green 10-lead DQFN.

### Applications

- Cell-Phone/PDA
- MP3/MP4/PMP
- Portable Instrumentation
- Battery Powered Communications
- Computer Peripherals
